

Special Session (SS03):

Webmapping technologies for better knowledge management on territories

Organiser:

Aniss MOUMEN: ALYM Innovation / Faculté des Sciences de Kénitra, Maroc, Email: contact@alyminnov.com/amoumen@gmail.com

Aim and scope of the session:

A significant amount of data is produced by our administrations, companies, research teams and associations. This data are predominantly presented in papers, rarely organized and badly exploited. Having this data, spatial or non-spatial, in a suitable format and at the right time is the purpose of a Webmapping platform, which consolidates knowledge, enhances the cumulative data, and facilitates the exchange between the actors. This session is to discuss Webmapping technologies, their applications, feedback and best practices for the best way to integrate these techniques into our organizations.
